THE INHALATION SEDATION SPECIALISTS

We specialise in the supply and maintenance of Inhalation Sedation Equipment for use in dental and other medical environments. This enables us to focus on client requirements, providing a total solution to all needs.

Choice
Offering a wide choice of products from various manufacturers, continually undergoing evaluation for client suitability and conformity to standards.

Service
We strive to ensure competitive pricing, ensuring that our clients need never withhold proper maintenance due to economic consideration. All our engineers are manufacturer trained and R A Medical holds sole OEM (Original Equipment Manufacturer) UK authorised service agent status for Matrx, Porter and Accutron products.

Advice
Our depth of knowledge in the field, covers 50+ years of experience; enabling us to offer sound, practical advice in all aspects of inhalation sedation administration. We operate a policy of assistance and support for the promotion of Relative Analgesia in dentistry and are willing to sponsor, advise and demonstrate, actively supporting post-graduate, lecture and training courses for health authorities and specialist interest organisations.

Safety & Quality
Quality control is of paramount importance within R A Medical. Strict procedures control all aspects of operation. We currently hold and operate to BS EN ISO 9001: 2015.

DEFINITION OF CONSCIOUS SEDATION

Conscious sedation 4.11 GDC : Maintaining Standards

A technique in which the use of a drug or drugs produces a state of depression of the central nervous system enabling treatment to be carried out, but during which verbal contact with the patient is maintained throughout the period of sedation. The drugs and techniques used to provide conscious sedation for dental treatments should carry a margin of safety wide enough to render loss of consciousness unlikely. The level of sedation must be such that the patient remains conscious, retains protective reflexes, and is able to understand and to respond to verbal commands.

In the case of patients who are unable to respond to verbal contact even when fully conscious the normal method of communicating with them must be maintained.

EQUIPMENT FOR NITROUS OXIDE/OXYGEN INHALATION SEDATION

Dedicated purpose-designed machines for the administration of inhalation sedation (formerly termed relative analgesia) for dentistry should be used. Such machines should conform to British Standards and be maintained according to manufacturers’ guidance with regular, documented servicing. Scavenging of Waste Gases must be active and sufficient to fully conform to current C.O.S.H.H. standards. Breathing systems should have a separate inspiratory and expiratory limb to allow proper scavenging. Nasal masks should be close fitting providing a good seal without air entrainment valves. Ref: Conscious Sedation in the Provision of Dental Care, Report of an Expert Group on Sedation for Dentistry DOH 2003

WHY SHOULD I HAVE MY EQUIPMENT SERVICED?

‘Conscious Sedation in the Provision of Dental Care’ 2003, states that equipment should receive “regular and documented servicing”.

Equipment should be maintained by a O.E.M. (Original Equipment Manufacturer) trained Service Provider. In the UK this effectively means one field service per annum. However, frequency of equipment use may indicate a requirement for 6 monthly service intervals.

A standard field service includes: Engineer attending on site, all standard service components, certification and performance warranty. Cover does not include accidental damage or equipment mis-use.

Please note: Any damaged or failed components, additional to standard parts and replaced at time of service are charged at list price in operation at time of service visit.

A postal service facility is also available for more remotely placed equipment, where it may not always be possible to offer an engineer attending on site on a regular basis.

Service of other Manufacturer flowmeters is available - please contact our Customer Service Department for further details.

R A Medical Services are the sole O.E.M. trained service provider in the UK and Eire for the following range: Porter, Matrx and Accutron.

HOW DO I ORGANISE A SERVICE VISIT?

Contact Customer Services on 01535 652444 or email info@ramedical.com

A Service Co-ordinator will then contact you to arrange a visit.

Every endeavour is made to accommodate specific requests with regard to time of day and date of attendance.

Following a service visit, you will then be automatically offered a visit on an annual basis unless instructed otherwise.

Important Note: It is vital that sufficient supplies of oxygen and nitrous oxide medical gases are available when the engineer attends on-site. Failure to provide these may result in a failed attendance charge being levied.

CODE OF PRACTICE: As a member of the British Dental Industry Association, R A Medical adhere to a Code of Practice. As such, we agree to ensure, as far as is practical or achievable, to ensure that products offered for sale are supported by adequate stocks and technical information. In addition, we as suppliers have ensured that equipment repair facilities and spare parts will be available to support the customer for the normal life of the product.

**USER GUIDANCE FOR MINISCAV™**

1) For installation please refer to the Manual; available on www.ramedical.com

2) It is essential to use an Active breathing system with the Miniscav - i.e. one capable of an air flow rate at the nasal mask of 40-45 L/min.

Please note: The Miniscav will not work with a Passive type dental breathing system
i.e. corrugated hose and single nasal mask type.

Never hang the exhaust hose out of a window.

From 2020 only the newer ‘snap-in’ type of venting models will be available i.e. RA2070

Older models i.e. RA2046 will still be supported for a period of no more than 10 years and spare parts are available. For further information, please contact Customer Services on 01535 652444 or email info@ramedical.com

Multi-use Small autoclavable nasal hood (grey) 33020
Multi-use Medium autoclavable nasal hood (grey) 33019
Multi-use Large autoclavable nasal hood (grey) 33018
Axess low profile nasal masks offer better visibility and easier access with unobstructed view of the oral cavity. They are designed to connect to slender, lightweight scavenger circuit tubing which is autoclavable. The mask itself is single use only to minimize cross-contamination. Available in two scents; Mint & Bubblegum, also Unscented. The masks have a contoured design, providing a good seal to minimize ambient nitrous oxide and gas flow into the patient’s eyes. Translucent colours and clear mask design shows the patient is correctly breathing through their nose as the mask fogs upon exhalation. Latex Free.
NITROUS OXIDE MONITORING
PULSE OXIMETRY & RESUSCITATION

DIFMLS51 NITROUS OXIDE DIFFUSION TUBE
• Diffusion tubes for personal monitoring of Nitrous Oxide exposure in the workplace. The tube is worn close to the breathing zone for up to 8 hours to determine personal exposure levels.
• Supplied product includes laboratory analysis and report. Tube dimensions: 6.3mm OD x 5.0mm ID x 90mm long.
• Per tube: £70.00

Important Note: These items have a very limited shelf life and must be used and returned to the laboratory immediately following use to facilitate efficient analysis. If not used within 5 weeks of receipt, for whatever reasons, the tubes must be returned and a new order placed. No refund can be offered in this circumstance. If tubes are not returned within 6 weeks of issue, there will be an additional charge levied of £70.00 per pen. There will be a £15 outward carriage charge per pen or multiple pens.

**MEDICAL GAS CYLINDER ADVICE**

**Oxygen Cylinders:** The colour coding of the shoulders of compressed medical oxygen cylinders is white (RAL 9101). The colour coding of the cylinder body is now also white (RAL 9101). In addition, cylinders will carry the oxygen name on the body. For a limited period, some cylinders in circulation may still have black bodies, as shown in the box opposite. The programme to convert all compressed medical oxygen cylinders to white bodies will be completed by 2025.

**Nitrous Oxide Cylinders:** No change to colour coding anticipated.

**Cylinder Bar Pressure:** Please be aware that only oxygen medical gas cylinders filled to a maximum of 137 Bar should be used with Inhalation Sedation Equipment. **Important Notice:** There are some cylinders in circulation which have been pressurised to 200 Bar - these are not suitable and should not be used. **Any use of these 200 Bar cylinders will invalidate service or equipment warranty in place.**

For further information please contact Customer Services.

**MEDICAL GAS CYLINDER CARE & STORAGE**

1. Cylinders should be stored in a secure, weatherproof and well-ventilated area.
2. Cylinders should be secured by means of brackets or chains. E or D size cylinders may be stored horizontally.
3. The store should have an adequate means of access, to facilitate delivery and collection of cylinders.
4. The storage area should be clearly identified i.e. by use of compressed gases warning signage. The emergency services should be informed of cylinder store location.
5. So far as is practical, lighting and electrical equipment should be sited in a safe position, remote from the cylinder storage.
6. Lubricants should be avoided. Only lubricants that are especially made for oxygen service and specified by the equipment supplier should be used.
7. When handling Oxygen cylinders, always ensure that hands are clean and free from oil or grease. Alternatively, use clean gloves.
8. Medical gas pressure reducing regulators should be handled with care and replaced every 6 years - sooner if worn or damaged.
9. Separate or identify full, empty and faulty cylinders.

References: Take care with oxygen HSE (Rev 2) & HTM 02-01.
